AI61002 (DLFA) Worksheet -1

In Table-1, P1, P2, ..., P10 represents the number of parameters and F1, F2, ... , F10 represents the number of flops(operations) for the respective layers (L1,L2,...,L10).
Calculate the number of parameters and Flops for each layer of the convolutional neural network given below for an **input of size 5 × 21 × 21**. The network operates in inference mode, i.e., in the software
library we set model.eval(). Calculate the Flops as the number of **FMA** (Fused-Multiply and Add) operations.

P1
(0.5 Points)

TABLE1

Layer Number	Layer	# Params	
L1	Conv2d: 32c 3w 2s 2p	P1	
L2	ReLU	P2	
L3	MaxPool2d: 2w 2s 0p	P3	
L4	Conv2d: 64c 3w 1s 0p	P4	
L5	ReLU	P5	
L6	MaxPool2d: 2w 2s 0p	P6	
L7	Flatten	P7	
L8	Linear: 256 → 128	P8	
L9	ReLU	P9	
L10	Linear: 128 → 10	P10
